About croFGD

Catharanthus roseus (L.) G. Don, a medicinal plant, produces monoterpene indole alkaloids (MIAs) derived from secologanin and tryptamine. By integrating genome sequence and 76 RNA-seq datasets available in public platforms, we constructed three types of co-expression network, and identified 6,336 functional modules in total. Furthermore, functional annotation information and several analysis tools such as gene sets enrichment analysis, functional module enrichment analysis and cis-element analysis, were provided for network analysis. We hope that the integration of co-expression network analysis and analysis tools can be used to improve *C. roseus* gene function annotation, help the communities to study the *C. roseus* functional genomics and make novel discoveries about key genes involved in some important biological processes.

Gene family

Cytochrome P450 Family

Cytochrome P450 of *Catharanthus roseus* is predicted by nucleotide and protein blast to David Nelson data downloaded from <http://dmnelson.uthsc.edu/CytochromeP450.html> and filtered based on domain predicted by InterProScan. There are 98 subfamilies and 191 members in our database.

Tools: motif analysis

Motif analysis of *Catharanthus roseus*

Combining text-mining technology with data sources from plantCARE, PLACE, AthMap etc. We collected 1035 motifs with published annotations. With these identified motifs and published annotations, we predicted TF/TR-binding regions. In addition to scanning for motif sequences, we offer a Z-score method that calculates the significance enrichment of motifs.

1. Sequence Scan

Please input a fasta sequence, we'll find out all the possible motifs.

Example

GO RESET

2. Name Scan

Please input a list of *Catharanthus roseus* gene names, and we'll compute the significant motifs located at 3000bp upstream of the gene, then show each motif and its frequency, users can also significantly analyze these motifs, and a job ID will generate.

Example

GO RESET

Or submit your previous job ID

GO RESET

3. Custom motif Scan

Please input a list of *Catharanthus roseus* gene names and the motif sequences you interested, we'll extract all these genes promoter sequence (3000bp upstream), then show each motif's frequency and significant analysis result.

Example

Please input motifs splited by ":"

GO RESET

Or submit your previous job ID

GO RESET

sequence scan

motif analysis

input your interested motif

Custom motif analysis

Your job ID: **job2017Dec18174016**

Gene list for search: CRO_T011620 CRO_T012804

Table 1: all of the deposited motifs in promoters of the searched genes:

| Motif | Count | Detail |
|-----------|-------|---------|
| CGGTCA | 1 | details |
| CC[AT]ACC | 0 | details |

Table 2: deposited significant motifs (p-value <= 0.1) in promoters of the searched genes:

There are no significant motif(s), good luck next time!

Tools: gene set enrichment analysis

Gene set enrichment analysis (PlantGSEA)

The GO terms, gene families, pathway and module information from our functional annotations were used as background gene sets. Users could submit gene list to obtain significantly gene sets.

Choose Gene Sets

- G1:Ontology
 - BP:GO biological process
 - CC:GO cellular component
 - MF:GO molecular function
- G2:Gene Family Based gene sets
- G3:Curated gene sets
 - PlantCyc:PlantCyc gene sets
 - KEGG:KEGG gene sets
- G4:MicroRNA Targets
- G5:CFinder predicted modules based on co-expression network
 - Global RNA-seq network module
 - Tissue preferential conditional network module
 - Treat response conditional network module

choose geneset

Choose Background

- Suggested background (Whole genome level)
